

PORCELAIN STAR™

BD-350P Porcelain Star

The Porcelain Star diamond blade offers improved performance for cutting porcelain tile. Through the use of Micro Bead bond technology the Porcelain Star ensures a smoother, more consistent surface finish and eliminates the chipping even with the hardest of tiles. The patented stiffening slot and ultra-thin kerf allow it to cut with less drag and resistance. This decreased resistance means longer blade life and increased cutting efficiency. The Porcelain Star outperforms and outlasts other premium porcelain blades.

Diameter	Width	Arbor	Part#
